

During May - June 2019, 15 potato producing regions as well as non-producing suppliers delivered potatoes nationally to fresh produce markets.

We have switched nearly all markets to the new Dipar system, which will make the inspections on the floor more efficient. We will be able to create a greater variety of statistics to Potatoes South Africa and the Department of Agriculture and rural Development.

All Prokon inspectors are now using the new Dipar system for capturing data throughout South Africa.

- 14 134 207 bags from 15 regions as well as non-producing suppliers were delivered to the fresh produce markets.
- On average 0.18% of consignments were downgraded.
